

THE CLIMATE NEWS

Vol 13-15 *flocard*

World's Largest Iceberg, holding 1 trillion ton of freshwater; Disappears.

Megaberg A68 was releasing 1.5 billion ton of fresh water everyday into the ocean before melting completely. All this freshwater could permanently alter ocean currents and disrupt water ecosystems.

Scientists expected it would take a decade for it to melt completely, but it took less than 4 years.

This is an indicator of Climate Emergency.

Compatibility test

A wet bulb temperature of 95 °F or 35 °C is incompatible with human life. Our current annual heat related death rate is 300,000 people worldwide, and about one third of those deaths can be associated to global warming.

flocard

harmony

/ˈhɑːməni/
noun

the state of being in agreement or concord.

see also: cooperation

Are Human and Nature in harmony?

We are all interconnected and interdependent, woven into a large web of LIFE. When, any aspect in this big web of life is compromised, the balance is broken. Increased carbon emission, deforestation, pollution etc., directly affects the health and prosperity of humans. [continue reading.](#)
